Introduction
Woodvale SC’s organisation for Year 9 and 10 is based on study within the eight Learning Areas:

1. The Arts
2. English
3. Health & Physical Education
4. Humanities & Social Sciences
5. Languages
6. Mathematics
7. Science
8. Technology

- Each week students study for four hours in the five Learning Areas of English, Mathematics, Science, Humanities & Social Sciences and Health & Physical Education.
- Students will be given up to three choices to study for two hours a week in the Learning Areas of Languages, Technology, Arts and special Physical Education.
- For some courses, each student’s level of achievement will determine his/her placement in a pathway.
- Choice of courses is available in some learning areas; however, every Year 9 student must complete at least one course in each of the eight learning areas listed above.
- Some elective courses have high costs and parents should consider the particular charges for each elective course before making final decisions.

Pathway Placement
When students enroll at Woodvale, they are placed by Woodvale’s Heads of Learning into their Mathematics, English, Science and Humanities & Social Sciences classes. All teachers in these areas follow the Western Australian Curriculum. Therefore, all students are exposed to the same general curriculum.

In order to better match the types of activities students do to their skills and abilities, each student is placed into pathways in these learning areas. The names of the pathways are Accelerated, Core and Essentials. The Accelerated classes work more quickly through the Western Australian Curriculum than the Core classes and as a result, the Accelerated classes will make use of the extra time to work to a greater depth in the Western Australian Curriculum areas. The Essentials classes will work more thoroughly on the essential areas of the Western Australian Curriculum. As students progress from Junior School through Middle School to Senior School there is increasing differentiation between the pathways.

The Heads constantly review student performance and attitude and effort in order to determine if students are in the correct pathways. Common times these occur are early Year 7, at the end of each school year and at the end of Semester 1.

Grades used to indicate performance at Woodvale are derived from the state-wide standards set by the Department of Education. So it can be common for a student in the Core pathways to always achieve a C grade for a course. If this is the case then that student is making progress as expected. If the grade varies from one year to the next then either they have improved their performance or under performed. So even though a student may not be in the same pathway as another student, each student is still measured against the same state-wide standard for each learning area.

Woodvale makes use of an exam in Year 10 in order to better determine success in the challenging Senior School courses – the statewide grade doesn’t always provide this information. The exams form a major part of the prerequisites for Year 11 courses.

Academic Reporting
The College will provide an academic report for each Year 9/10 student at the end of each semester. They will have a grade of A-E for all courses and Year 10 students will receive an examination mark for Mathematics, English, Humanities and Social Sciences and Science.
Course Selections for Next Year

At Woodvale SC we understand the complexity of the decision-making concerning choosing subjects. One must consider personal interests and strengths alongside aspirations for the future, while at the same time being aware of “keeping as many doors open” as possible so that one is still prepared for the inevitable changes of mind that often take young people in different directions from those once planned.

As well as reading the information contained in this handbook, Year 8/9 students:
- Will hear presentations from the Teachers-in-Charge in each of the elective areas and be made to feel welcome to see these teachers at other times to have questions answered.
- Be able to ask their current teachers including their contact Teacher for further information about subjects for next year.
- Can see their year coordinator for more help.

In all of this we do ask that students and their parents choose carefully. Once the new school year commences, subject changes are difficult as often classes are full, and changes are often unsettling and challenging for students as they attempt to catch up on work already completed.

The Process
- In addition to this handbook, which outlines each course, each student will be provided access to the college's online selection system. Please read course descriptions carefully, so that you are aware of the contents of all courses.
- Semester 1 Reports will be provided in the second last week of Term 2. You may wish to consider these before selecting options.
- Selections must be submitted by the end of school Week 2 of Term 3.
- Placements in Mathematics, Science, English, Health, Humanities & Social Sciences, General Physical Education and (Year 9 only - Chinese or Japanese) will be assigned by each faculty during Term 4.
- Students will need to select their Arts and Technology course for Year 9.
- You should also be aware that it may not be possible to satisfy all combination of courses owing to unavoidable restrictions on staff, and the availability of resources such as specialist rooms.
- Students will be advised of their placement at a future time.
- Courses costing $100 (*) or more can only be selected if all charges have been paid (or negotiated payment plans are up to date) by the beginning of Semester 2 2015.
Year 9 (2016)

Students will be required to enroll in two full year electives; one must be from the Arts and one from a Technology. Listed below are the elective courses available for selection for 2016. In case students aren't offered their first choices, each student needs to nominate a reserve choice for both Technology and the Arts. Therefore, two Arts and two Technology choices must be made. Students enrolled in the Specialist Music program don’t choose another Arts.

Selections will be managed by the College’s online system. Instructions are sent via email to parents.

Year 10 (2016)
Students must choose six elective courses. It is most important that selections are listed in strict order of preference – ie selection number 1 is the elective course you MOST WISH to study. Students will be enrolled in three elective courses. Choices 4, 5 and 6 are reserve choices ONLY.

Selections will be managed by the College’s online system. Instructions are sent via email to parents.

Course Pre-requisites for 2016 Year 11 Courses

Listed here are required Year 10 standards (pre-requisites) for each Year 11 course. Students are not offered immediate entry into Year 11 courses unless they have achieved the course pre-requisite.

As well as academic performance, the College looks at the overall profile of the student’s performance in all courses including, work ethic, attendance and behaviour in order to judge course suitability.

Note: achieving a pre-requisite may not guarantee a place in a course because the College may have too many students for the number of places in a class. This often occurs with courses such as Chemistry. Students will be placed based on performance along with fit with other courses they have chosen on the timetable – two courses may clash. Also, if students don’t achieve the pre-requisites by the end of Semester 1 they will have an opportunity to achieve the result by the end of the year, however; again class numbers will determine if vacancies are available. Students are put on a waiting list in these circumstances.

THE ARTS

YEAR 9

VISUAL ARTS – 9AA
In this course of study students will experience a wide range of art forms ranging from painting to printmaking, drawing, sculpture, and digital design as they build on skills developed in the Year 8 course. Drawing skills will be developed and drawings will form the basis from which all designs are developed.

The Semester 2 course places further emphasis on skills development and introduces an awareness of social and cultural context, giving students the opportunity to produce meaningful artworks with a personal message. Students learn about art history and draw influence from great artists from ancient to contemporary times. This course is a good foundation for Year 10 and Senior School visual arts courses of study.

GRAPHIC ARTS – 9AG
This course provides students with a foundation for graphic design. Students use digital and hand tools to develop skills and sensitivity to the elements of design. Layout techniques, typography and computer software such as Adobe Photoshop are introduced, and combined with tools such as digital cameras, scanners and colour printers to create professional graphic artworks.

The Semester 2 course continues the skills and knowledge taught in Semester 1, including building knowledge and understanding of social and cultural aspects of the design and visual communication process.

DRAMA – 9ADR
Students will develop skills in:
- Voice and Movement
- Play-building
- Drama techniques and conventions
- Collaborative group work

- The elements of drama
- Audience awareness
- Theatre Etiquette

MEDIA STUDIES – 9AME
The full year course will offer students a range of practical and analytical skills in the following areas:
- Basic camera care and operations
- Digital video editing techniques
- Video Production
- Analysis of a range of Media texts (Film, Television and Radio)
- Multimedia presentations and products

Students are given the opportunity to create a range of video productions.

MUSIC
New students must apply directly to the music department.

Students will have an instrumental lesson once a week and this will be supported by classroom music studies in aural perception, music literacy, vocal skills and ensemble (band) performance. The instrumental lesson will be conducted during school hours while the ensemble component will be taken out of school hours.

Students studying these courses are credited with an extra subject, over and above the usual 9, because the instrumental and ensemble music courses are completed outside the normal school timetable.

INSTRUMENTAL AND ENSEMBLE MUSIC - 9MUI
This course is designed for group tuition lessons on a child's specific instrument. The classes are held either on a rotating basis throughout the timetable or out of school hours with a private tutor specialising on the child's chosen instrument. This course also involves participation in weekly ensemble and choir rehearsals, concerts, and one camp per year.
CLASS MUSIC – 9AMUC
Requirement: Students must be learning an instrument through the college or private study.

Through practical music-making and listening activities students will continue the study of literature of music, basic music knowledge, aural awareness and appreciation as well as developing skills on their individual instruments.

MEDIA STUDIES – 10AME
This full year course is focused on preparing students for the Media Production and Analysis courses that are run in Years 11 and 12. If students plan to take the Year 11/12 Media courses then this course provides a good introduction to the skills and theory that are covered in the Senior School courses.

The course will offer students a range of practical and analytical skills in the following areas:

- Basic camera care and operations
- Digital video editing techniques
- Create small video productions
- Analysis of a range of Media texts (Film, Television and Radio)
- Multimedia presentations and products

The media course in Year 10 is outcomes based and students are assessed on the following: Media Ideas, Media Production, Responses to Media and Media in Society.

YEAR 10

VISUAL ARTS – 10AV
In this course of study students will experience a range of art forms ranging from painting to printmaking, drawing, sculpture, and digital design as they build on skills developed in the Year 9 course. There is further emphasis on awareness of social and cultural context, giving students the opportunity to produce meaningful artworks with a personal message. Students learn about art history and draw influence from great artists from ancient to contemporary times.

Students will learn how to discuss the elements and principles of art to develop their analytical skills in preparation for Senior school units.

DRAMA – 10ADR
Pre-requisites: none
Students will develop skills in:

- Solo and duo performances
- Workshops: in improvisation and characterisation, and mime and acting
- Stagecraft: using the stage, lights, sound and theatre roles in planning for a performance
- Scriptwriting: students use the conventions of scriptwriting to write and produce scripts.
- Performance: using devised and written scripts, students act, direct, and manage their own group performances.

PHOTOGRAPHIC TECHNOLOGY – 10AP
Students explore a variety of camera techniques to cover the major commercial fields of Photography. Students produce work that demonstrates good composition and tonal qualities with an emphasis on the use of digital cameras and some use of SLR film cameras. They are encouraged to experiment with darkroom techniques and digital computer software to produce artistic prints. Students are given considerable freedom to be creative and imaginative and develop and individual approach.
MUSIC
New students must apply directly to the music department.

Students will have an instrumental lesson once a week and this will be supported by classroom music studies in aural perception, music literacy, vocal skills and ensemble (band) performance. The instrumental lesson will be conducted during school hours while the ensemble component will be taken out of school hours.

Students studying these courses are credited with an extra subject, over and above the usual 9, because the instrumental and ensemble music courses are completed outside the normal school timetable.

INSTRUMENTAL AND ENSEMBLE MUSIC - 10MUI
This course is designed for group tuition lessons on a child's specific instrument. The classes are held either on a rotating basis throughout the timetable or out of school hours with a private tutor specialising on the child's chosen instrument. This course also involves participation in weekly ensemble and choir rehearsals, concerts, and one camp per year.

CLASS MUSIC – 10AMUC
Pre-requisites: Class Music 9MUC or equivalent study and enrolment in an instrumental and ensemble music course.

Through practical music-making and listening activities students will continue the study of literature of music, basic music knowledge and develop their aural awareness of music appreciation. This course must be studied in order to progress to 2A/2B Music.
ENGLISH

YEAR 9

ENGLISH - 9EN
Year 9 students extend their Reading and Viewing, Writing, and Listening and Speaking skills and are expected to explore challenging and less familiar works and ideas. Students also develop a critical understanding of the print and electronic media. Class work is directed towards ensuring that students become both confident and competent in comprehending and composing, and that oral skills are developed through a range of formal and informal activities. Students are expected to work effectively, as individuals, and collaboratively with others. They will explore a balanced range of text types from fiction, non-print media, poetry, drama and non-fiction.

Each Lower School course will be part of a pathway leading to appropriate subjects in Senior School. Students will be placed in pathways according to their ability as demonstrated in class performance as well as tests such as NAPLAN. The pathways are Accelerated, Core and Essential.

The English courses in Years 9 are Western Australian Curriculum based, and students are numerically assessed on the three learning outcomes of Reading and Viewing, Writing, and Listening and Speaking.

English courses are engaging and dynamic with the focus very much on students striving to achieve their best in environments that accommodate individual learning styles and abilities.

YEAR 10

ENGLISH - 10EN
Year 10 students extend their Reading and Viewing, Writing, and Listening and Speaking skills and are expected to explore challenging and less familiar works and ideas. Students also develop a critical understanding of the print and electronic media. Class work is directed towards ensuring that students become both confident and competent in comprehending and composing, and that oral skills are developed through a range of formal and informal activities. Students are expected to work effectively, as individuals, and collaboratively with others. They will explore a balanced range of text types from fiction, non-print media, poetry, drama and non-fiction.

Each Lower School course will be part of a pathway leading to appropriate subjects in Senior School. Students will be placed in pathways according to their ability as demonstrated in class performance as well as tests such as NAPLAN. The pathways are AE, Accelerated, Core and Essential.

The English courses in Year 10 are Western Australian Curriculum based, and students are numerically assessed on the three learning outcomes of Reading and Viewing, Writing, and Listening and Speaking.

English courses are engaging and dynamic with the focus very much on students striving to achieve their best in environments that accommodate individual learning styles and abilities.

Year 10 courses will prepare students for Senior School ATAR and General Courses.
YEAR 9
HEALTH EDUCATION - 9PH
This course further develops the students' knowledge, skills and attitudes related to health and personal development with an emphasis on social development and the influence of family, peers, role models and the media. Legal and illegal drug use is investigated with Alcohol and Cannabis being the emphasis in Year 9. Issues dealt with include reasons for use, dangers, pressures encountered, legal considerations and safer alternatives. The short and long-term effects of drug use will be investigated considering the physical, emotional and social impacts. The sexuality component of the course discusses Conception, Pregnancy and Birth. While abstinence is promoted, safer sex practices will also be considered. The direct relationship between lifestyle and health and well-being is examined. Aspects include health risk factors and lifestyle diseases such as diabetes, cancer and heart disease. The acceptance and needs of the disabled in our society will also be explored. A highlight of this course is guest speakers from the Para-Quad Association of WA who share their experiences and stories to promote risk avoidance.

use of a motor vehicle are explored through the Keys for Life road safety program. Students are given the opportunity to sit their Learner’s Permit Theory Test in class. Drug awareness is an important part of the course with students examining ways the individual and the community can work towards reducing the harm associated with drug use, misuse and abuse. Highlights of this course includes guest speakers from Arafmi (Mental Health Carers Association) and from the RAC on Road Trauma.

YEAR 10
HEALTH EDUCATION - 10PH
The main aim of this course is to develop in students the need to take responsibility for their own health and well-being. Students are becoming more independent and susceptible to the many influences and concerns in modern society. They are given opportunities to learn and practice the skills and assertive responses required in the many challenging situations encountered by young people. Students explore the importance of setting goals and making plans to achieve and protect their goals. They learn the skills of resilience so they can cope with pressure, stress and disappointment and support a friend in need. Mental Illness and the stigma associated with Mental Illness is looked at with the intent of helping students to better understand this topic and support those affected by Mental Illness. Relationship skills and sexuality is explored with the emphasis being responsible decision making and protection from unplanned pregnancy, sexual assault and sexually transmitted infections as well as HIV and AIDS. Whilst abstinence is promoted and students explore ways to resist and deal with pressures to be sexually active, contraception is also investigated. Road Trauma and the responsibilities linked to the use of a motor vehicle are explored through the Keys for Life road safety program. Students are given the opportunity to sit their Learner’s Permit Theory Test in class. Drug awareness is an important part of the course with students examining ways the individual and the community can work towards reducing the harm associated with drug use, misuse and abuse. Highlights of this course includes guest speakers from Arafmi (Mental Health Carers Association) and from the RAC on Road Trauma.
YEAR 9
GENERAL PHYSICAL EDUCATION - 9PEF/9PEM
This course is designed to provide students with the opportunity to develop skills in Tennis, Gymnastics, Athletics, Football (M), Touch Rugby (F), Hockey, Lacrosse, Softball and Dance (F).

Attendance at the Interhouse Swimming and Athletics Carnivals is highly recommended in Year 9.

All students will also participate in a sport of their choice for their year group’s Winter Lightning Carnival in Term 2.

YEAR 10
GENERAL PHYSICAL EDUCATION - 10PEF/10PEM
This course is designed to provide students with the opportunity to develop skills in Baseball (M), Badminton, Volleyball, Cricket, Athletics, Netball (F), Football (F), Touch Rugby (M), and Gridiron (M). Girls will also participate in a personal fitness course such as Yoga or Body Balance. Boys will also cover aspects of Gaelic Football. Term 4 will give students a degree of choice in selection of Physical Education activities.

Attendance at the Interhouse Swimming and Athletics Carnivals is highly recommended in Year 10.

All students will also participate in a sport of their choice for their year group’s Winter Lightning Carnival in Term 2.

ELECTIVE COURSES
All elective courses in the Physical Education area incur further costs.

SPECIALISED COURSES YEARS 9 AND 10
SPECIALISED BASKETBALL
(by application only)
Years 9 and 10, 9PBF/9PBM and 10PBF/10PBM
The college operates a 'special' Basketball class in each of the lower school years for students with a special interest and talent in Basketball. These classes operate instead of Physical Education in Years 9 and 10. Entrance to these 'special' classes is competitive in Year 8. A small number of vacancies may occur in Years 9 and 10, and students who may be interested in these places should apply directly to the Program Coordinator. Entry to the course is by way of application and selection processes conducted by the Program Coordinator, Mr Kelvin Browner, and college based coaching staff. Course costs apply.

SOCCER SCHOOL OF EXCELLENCE
(by application only)
Years 9 and 10 – 9PSF/9PSM and 10PSF/10PSM
The college operates a ‘special’ Soccer class in each of the lower school years for students with a special interest and talent in Soccer. These classes operate instead of Physical Education in Years 9 and 10. Entrance to these ‘special’ classes is competitive in Year 8. A small number of vacancies may occur in Year 9 and 10, and students who may be interested in these places should apply directly to the Program Coordinators Mr Ratcliff (Boys) or Mr Rooney (Girls). Entry to the course is by way of application and selection processes conducted by the Program Coordinators. Course costs apply.
YEAR 10
AUSTRALIAN RULES FOOTBALL
SKILLS FITNESS & TACTICS -10PA
This course is for students who are currently playing at club level and have a desire to further develop their game. Activities include:

- Level 0 Coaching
- Level 1 Umpiring
- Advanced game play systems
- Individual skills program
- Individual fitness program
- Playing and umpiring for Woodvale SC.

NETBALL – SKILLS, FITNESS, TACTICS AND GAME PLAY - 10PN
This course gives students the opportunity to further develop their skills, fitness and tactics in the sport of Netball. The focus of the Year 10 course is to further develop students in the areas of coaching and umpiring and they are provided with the opportunity to refine these skills with younger players.

OUTDOOR EDUCATION - 10PO
Pre-requsites: Strong open water swimming ability and willingness to work with others.

This course is designed to develop skills and understanding relative to pursuits in outdoor environments. Activities depend on; availability, cost, transport and teacher expertise. They may include:
1. SNORKELLING - includes theory and practical lessons on equipment use, the underwater environment and aquatic animals
2. KAYAKS - basic flat water techniques.
3. NAVIGATION - includes following and setting orienteering courses, map reading, compass use, and route planning.
4. CAMP CRAFT - includes bush cooking, survival skills, tent work, backpacking and minimal impact techniques.
5. SURF AND BEACH ACTIVITIES - includes a course from Surfing W.A., on standup surfing techniques, bodyboarding & body surfing skills and theory on waves, and the dangerous beach environment.

HIGHLIGHTS:
- Optional camps - Snorkelling at Rottnest in Term 1 and day excursion in Term 4.
The Humanities and Social Sciences are the study of human behaviour and interaction in social, cultural, environmental, economic and political contexts. The humanities and social sciences have a historical and contemporary focus, from personal to global contexts, and consider challenges for the future.

In the Western Australian Curriculum, the Humanities and Social Sciences learning area comprises four subjects: History, Geography, Economics and Business, Civics and Citizenship.

Through studying Humanities and Social Sciences, students will develop the ability to question, think critically, solve problems, communicate effectively, make decisions and adapt to change. Thinking about and responding to issues requires an understanding of the key historical, geographical, political, economic and societal factors involved, and how these different factors interrelate.

The Humanities and Social Sciences subjects provide a broad understanding of the world in which we live, and how people can participate as active and informed citizens with high-level skills needed for the 21st century.

The courses will offer the opportunity to develop important knowledge and skills required for successful study in Senior School Courses.

<td><strong>The Modern World and Australia</strong></td>
</tr>
<tr>
<td>The Making of the Modern World</td>
<td>A study of the history of the modern world and Australia from 1918 to the present, with an emphasis on Australia in its global context. The twentieth century became a critical period in Australia’s social, cultural, economic and political development. The transformation of the modern world during a time of political turmoil, global conflict and international cooperation provides a necessary context for understanding Australia’s development, its place within the Asia-Pacific region, and its global standing.</td>

</tbody>
</table>
**Why Languages Other Than English?**
- To help promote mutual understanding in a thriving multi-cultural society.
- To promote and develop understanding of the structure of the English language.
- To help us become better communicators.
- LOTE bonus for students going to university.

**Why Study Chinese?**
- Students at Woodvale SC have the opportunity to travel to China as part of an annual tour. Past tours have visited our sister school in Jinan, The Great Wall of China near Beijing, and the modern metropolis of Shanghai.
- Mandarin Chinese (the official language of China) is spoken by 873 million speakers, making it the most widely spoken first language in the world. One fifth of the world’s population speaks Chinese.
- China has now become the second largest economy in the world, and is one of the largest trading partners of the United States and Australia.
- The Chinese Government regularly provides generous scholarships to students who study Chinese Language. These scholarships allow you to study in overseas at little or no cost!
- Chinese is a fun language to learn – Chinese teachers at Woodvale SC have developed a Chinese course that is both educational and enjoyable!

**Why Study Japanese?**
- Japan’s one of our key regional neighbours.
- Japanese tourists are by far the LARGEST nationality choosing to visit Australia.
- There is a growing demand for graduates with knowledge of Japanese and Japan.
- The number of employment positions for Japanese speakers has increased dramatically in such areas as Foreign Affairs, Trade, Tourism, Industrial Relations, Politics and Commerce.
- Learning to pronounce Japanese is relatively easy as there are fewer sounds in Japanese than are found in English.
- Students at Woodvale SC may participate in our exchange trip to Japan, in Year 10 to 12, and have the opportunity to apply for exchange programs.
YEAR 9

Teachers will place students into the correct pathway for Year 9 Languages – either Accelerated or Essential, in either Japanese or Chinese – Mandarin.

CHINESE – 9LC
The two courses in Chinese in Year 9 are very closely linked in terms of topics and themes taught. The Essentials course has more of a vocational feel to it – providing students with opportunities to learn simple language and cultural information. The Academic course is a language based course and is designed for students who have studied Chinese Language in Year 8. Students will have the choice to study this language further in Year 10, with opportunities to study WACE or Vocational Courses in Senior school.

Course
During Term 1 and 2 students will explore Chinese Language and culture from a personal perspective, enabling them to share information related to personal identity, aspects of everyday life, and popular culture. Students will primarily use Pinyin (the Chinese Romanized reading system); however, students will also begin to recognize and read Hanzi (Chinese Characters). Topics include: Family and self-introduction, and shopping, food and drinks.

In Term 3 and 4 students will be able to discuss information related to personal identity, aspects of everyday life, and popular culture in more detail, and their confidence in the language will increase. Topics include: Describing friends, Daily routines and school subjects.

JAPANESE – 9LJ
The two courses in Japanese in Year 9 are very closely linked in terms of topics and themes taught. The Essentials course has more of a vocational feel to it – providing students with opportunities to learn simple language and cultural information.

The Academic course is a language based course and is designed for students who have studied Japanese Language in Year 8.

Course
Students start the year with the topic of sport; including traditional Japanese games and modern sports. Shopping is also covered in first semester. Students prepare and plan for a Japanese market place shopping simulation. There is a strong ICT focus with websites such as Quizlet and Kahoot used frequently, as well as some great apps on the iPads.

Topics in Semester 2 include; Neighbourhoods – how are Japanese and Australian homes different? Students also cover transport, festivals and weather topics. Katakana is introduced this semester as well; enabling students to be able to write borrowed words with ease. Topics include: Shopping and Weather.

YEAR 10

Students can continue their language studies in Senior School at the college, with WACE courses as well as vocational courses (TAFE pathways) offered.

CHINESE – 10LC
Certificate II In Applied Languages
This academic course is a great choice for students who enjoy and/or are performing well in lower school Chinese. Prerequisite is B grade in Year 9 Chinese

There is an opportunity for students to travel to China on tour in Year 10 or Year 11. The Year 10 Chinese course is an embedded course, including Chinese Year 10 as well as Certificate II in Applied Languages (VET pathway). Students will need to have their Year 9 and Year 8 work which will be used to recognize prior learning, necessary for them to obtain the Certificate II in Applied Languages.

This embedded course means that students will be working their way through an academic course as well as giving them the opportunity to obtain a national qualification. Students are now able to BANK the qualification/credit gained in this course towards WACE in Year 12.

This course is the prerequisite for Year 11 and Year 12 Chinese.
SEMESTER 1
The overarching focus for the Year 10 course is workplace communication; in written and spoken form.

The focus for this unit is 青少年 (teenagers). It introduces students to the Chinese language and culture from a personal perspective, enabling them to share information related to personal identity, aspects of everyday life, and popular culture. Students compare and contrast their own lifestyles with other Chinese teenagers.

SEMESTER 2
The overarching focus for the Year 10 course is workplace communication; in written and spoken form.

The focus for this unit is 课余生活 (things to do). Students explore leisure activities that are popular with youth today and share information about where and how they spend their leisure time. Students use the language they have acquired to express their opinions in simple discussions relating to technology and leisure. Students make use of the internet to learn about China and to communicate with Chinese friends.

JAPANESE – 10LJ
Certificate II In Applied Languages
This academic course is a great choice for students who enjoy and/or are performing well in lower school Japanese. Prerequisite is B grade in year 9 Japanese

There is likely to be an opportunity for students to travel to Japan on tour in year 10 or year 11.

The Year 10 Japanese course is an embedded course, including Japanese Year 10 as well as Certificate II in Applied Languages (VET pathway).

Students will need to have their year 9 and year 8 work which will be used to recognize prior learning, necessary for them to obtain the Certificate II in Applied Languages.

This embedded course means that students will be working their way through an academic course as well as giving them the opportunity to obtain a national qualification. Students are now able to BANK the qualification/credit gained in this course towards WACE in Year 12. This course is the prerequisite for Year 11 and Year 12 Japanese.

SEMESTER 1
The overarching focus for the year 10 course is workplace communication; in written and spoken form.

The focus for this semester is ティーンエジャー (teenagers)

This unit introduces students to the Japanese language and culture from a personal perspective, enabling them to share personal information and obtain basic information from others related to personal identity, daily life of Japanese-speaking communities, and popular activities in Japan and Australia.

Students explore activities and events associated with their personal life in Australia, including family, friends, school life, daily activities, and the everyday life of teenagers in Japan.

Film festival attendance and participation in a Japanese lunch are planned for year 10 students.

SEMESTER 2
The overarching focus for the Year 10 course is workplace communication; in written and spoken form.

The focus for this unit is 近所 (neighbourhood).

Students build on their developing language skills in order to share information about locations and directions, around the home, the neighbourhood, locations of shops and shopping. The unit leads to the exploration of activities and events associated with Japanese communities, for example, getting around Japan, visiting department stores and reading signs.
MATHEMATICS

Year 7, 8, 9 and 10 students will study a year long course. Each course will be part of a pathway leading to appropriate mathematics courses in Senior School. The recommended course for all students will be matched to their achievement from the previous year’s study.

YEAR 9

MATHEMATICS – 9MA

The Year 9 course follows the Western Australian Curriculum, which is compulsory from 2015. The course will cover the topics of Number and Algebra; Measurement and Geometry; and Statistics and Probability. The use of information technology is embedded into all areas of mathematics.

There are three pathways at Year 9 level – Accelerated, Core and Essentials. All programs are based on the Western Australian Curriculum and provide students with the prospect of achieving a minimum of a C grade. Students may have access to opportunities to be involved in regional, state and international mathematics competition throughout the year.

At the end of the year, the Semester 2 report will indicate the achievement of your child in relation to the national standards in mathematics. Achievement in Year 9 will determine which pathway (Accelerated, Core, Essentials) your child is placed in for Year 10. There are minimal opportunities for students to move between pathways in Year 10 due to the Semester 1 course mark and/or exam mark being used as prerequisites for Year 11 courses.

Students in the accelerated pathway may have access to opportunities to be involved in regional, state and international mathematics competition throughout the year. Students who need to pass the Online Literacy and Numeracy Assessment (OLNA) will have access to additional support in class time.

At the end of the year, the Semester 2 report will indicate the achievement of your child in relation to the national standards in mathematics.

CALCULATORS IN THE MATHEMATICS CLASSROOM

A calculator is a tool integral to the teaching of the Western Australian Mathematics curriculum. They are used in a variety of situations including problem solving, investigating and, of course, in routine calculations. They are an essential item for all students, irrespective of the pathway studied. The college recommends a suitable calculator to purchase and this will be suitable for use in Year 7, 8, 9 and 10. All students are expected to have their own calculator.

YEAR 10

Students aspiring to an ATAR course (specialist, methods or applications) will need to achieve a minimum of a B grade in Year 10 mathematics.

MATHEMATICS – 10MA

The Year 10 course follows the Western Australian Curriculum. The course will cover the topics of Number and Algebra; Measurement and Geometry; and Statistics and Probability. The use of information technology is embedded into all areas of mathematics.

There are three pathways at Year 10 level – Accelerated, Core and Essentials. All programs are based on the Western Australian Curriculum. There are minimal opportunities for students to move between pathways in Year 10. Semester 1 course mark and/or exam mark are used as prerequisites for Year 11 courses.

Students in the accelerated pathway may have access to opportunities to be involved in regional, state and international mathematics competition throughout the year. Students who need to pass the Online Literacy and Numeracy Assessment (OLNA) will have access to additional support in class time.

At the end of the year, the Semester 2 report will indicate the achievement of your child in relation to the national standards in mathematics.

CALCULATORS IN THE MATHEMATICS CLASSROOM

A calculator is a tool integral to the teaching of the Western Australian Mathematics Curriculum. They are used in a variety of situations including problem solving, investigating and, of course, in routine calculations. They are an essential item for all students, irrespective of the pathway studied. The calculator recommended on the booklist is suitable for use in years 7 – 10. All students are expected to have their own calculator.
SCIENCE

YEAR 9 and 10 SCIENCE CURRICULUM OVERVIEW
The Year 9 and 10 Science program is based on the new Western Australian Curriculum. It provides an understanding of scientific inquiry methods, a foundation of knowledge across the disciplines of science; and develops an ability to communicate scientific understanding and use evidence to solve problems and make evidence based decisions.

Structure of the Western Australian Curriculum: Science
- **Science understanding:** Which focuses on the important science concepts from across different areas of science.
- **Science inquiry skills:** Which focuses on skills essential for working scientifically
- **Science as human endeavour:** Which focuses on the nature and influence of science.

The following table identifies the key content areas, concepts, and skills covered throughout Year 9 and 10 by all students.

<table>
<thead>
<tr>
<th>Science understanding</th>
<th>Science inquiry skills</th>
<th>Science as a human endeavour</th>
</tr>
</thead>
<tbody>
<tr>
<td>Biological Sciences</td>
<td>Questioning and Predicting</td>
<td>Nature and development of</td>

<td>Planning and Conducting</td>
<td>science</td>
</tr>
<tr>
<td>Earth and Space Sciences</td>
<td>Processing and analysing data and information</td>
<td>Use and influence of science</td>
</tr>
<tr>
<td>Physical Sciences</td>
<td>Evaluating and Communicating</td>
<td></td>
</tr>
</tbody>
</table>

YEAR 9/10
On the basis of Year 8 Science results, students are placed in one of two pathways - Accelerated (A) or Core (C). In each pathway the necessary WA Curriculum coursework is the same, however, the A Pathway provides an opportunity for students to be engaged in Science Enrichment. Students can be moved between pathways during the year, depending on demonstrated achievement and scientific ability.

Science Enrichment:
The Science Enrichment Program is designed to enrich and extend students’ knowledge, application and inquiry skills in Science. The program offers students access to a range of learning experiences, opportunities and challenges including: individual written competitions (e.g. ICAS Science competition, Rio Tinto Big Science Competition, RACI Chemistry competition), group/team competitions (e.g. STAWA Science IQ quiz online, Aurecon Bridge Building Competition, in school “Big Crystal” competition), Investigations (e.g. STAWA Science Talent Search, CSIRO CREST Awards), Excursions (e.g. Scitech, Perth Zoo, AQWA) and Incursions (e.g. guest speakers, Scitech Beyond the Beaker presentations, National Science Week).
DESIGN and TECHNOLOGY
YEAR 9
BUILDING & CONSTRUCTION – 9DB
The content and delivery for this course is suitable to both male and female students. Every effort has been made to select activities and exercises that appeal to both sexes.
This one year course is a composite of materials and processes most likely to be used at home or in light industry. Content and structure for this area of study includes Welding and Construction, Carpentry, and Systems. The development of safe work practices with underpinning knowledge is achieved during the course.

Welding and Construction -
Students are introduced to the welding processes of oxy-acetylene and arc welding. Introduction to the associated trades and occupations are discussed.

Activities –
- Arc welding – students’ complete small exercises demonstrating welding ability.
- Oxy acetylene welding – students’ complete a series of exercises that demonstrates fusion, filler, and braze welding techniques.
- Manufacture of small projects that demonstrates various acquired welding skills.

Carpentry –
Complete simple construction tasks that introduce the student to power tool safety and use, develop knowledge in site preparation, planning strategies and investigation, quantities and cost estimation.

Activities –
- Undertake activities that develop introductory carpentry skills

Systems -
Develop the student’s ability to understand the structured development of a process or sequence from concept to production.

Activities –
- Small project research and design
- Knowledge of fasteners and finishing techniques
- Assembly of projects
- Introduction to small engines and their operation

ELECTRONICS & TECHNOLOGY - 9SCEE
This is designed as a two year course covering introductory electronics through to applications of electronic circuits.

Module 1
This module covers basic electronic theory, component identification and valuing and the application of this technical information to the construction of a series of models.

Module 2
This module covers the development of electronic theory and the use of computer added design to investigate theories and further develop project construction.
JEWELLERY - 9DJ
This is a fun, leisure time course enabling students to learn foundational skills and processes in Jewellery making. The course covers important workshop safety considerations. It develops skills involved with using different metals including sterling silver and brass. Materials such as dichroic glass, carbon fiber, polymorph plastic, acrylic and cubic zirconia gems in the production of jewellery.

- Jewellery Technology is a subject suited to both male and female students. Projects are adjusted to appeal to both sexes.

- The course now introduces ITC based technologies such as 3D Printing and laser cutting to produce jewellery.

This is a great course to do in order to develop artistic and creative ability, and teaches valuable practical skills. It provides an excellent foundation for Year 10 Jewellery and also Senior School Jewellery.

Please direct any questions to Mr Christmas (Jewellery Teacher).

TECHNICAL GRAPHICS - 9DT
This course provides an enjoyable opportunity to develop students’ creativity, skills and knowledge while using an exciting universal communication language known as Technical Graphics or Technical Drawing for those of us born a few years earlier.

After experiencing some short foundation projects involving both engineering and architectural drawing, students will choose a pathway in either of these fields in which they focus for the year.

In the engineering pathway, students will be given design exercises for which they must produce engineering and 3D presentations. Architectural pathway students will be given building design problems producing plans, electrical layouts, furniture layouts and 3D presentations.

All students will work with vector graphics to design and produce vinyl signs and stickers.

Equipment available for student use in the classroom consists of 3D Printers, Vinyl Cutter, Milling Machine, Laser Cutter/Engraver and various hand tools with which to bring their designs to life.

Students have the opportunity to use 3D software on their home computers as part of school software licensing agreements.

If you have an interest in this course and would like further, more specific information, please do not hesitate to see the Technical Graphics teacher.

WOOD TECHNOLOGY - 9DW
In this course students are introduced to various machines and hand-held power tools, as well as common wood working materials. There is an emphasis on safe working procedures in the construction of attractive and useful projects. An industrial standard finishing facility allows students to complete projects to a high standard. Examples of projects in this course include: a colonial style stool, carry box, small table and clock. A CNC engraving unit is available for students to use to decorate many of these projects.
YEAR 10

BUILDING & CONSTRUCTION – 10DB
The content and delivery for this course is suitable to both male and female students. Every effort has been made to select activities and exercises that appeal to both sexes.

This course is an extension of Building Construction 1 which students may have taken in Year 9. The subject further develops the skills, knowledge and processes of Welding, Home Maintenance and Systems. A continuation of safe work practices with under-pinning knowledge is achieved during the course.

Welding -
Students further develop their knowledge and abilities in oxy-acetylene and arc welding from Building Construction 1. Students are introduced to Metal Inert Gas (MIG) welding process.
Activities –
• MIG welding – complete small exercises that assist with the introduction of MIG and demonstrate welding competency.
• Design and manufacture a small project that demonstrates various acquired welding skills.

Home Maintenance –
Complete simple building construction tasks that introduce the student to power tool safety and use, develop knowledge in site preparation, planning strategies and investigation, quantities and cost estimation.
Activities –
• Construct simple brick structures – corners and pillars
• Undertake activities that develop introductory carpentry skills

Systems -
Develop the student’s ability to understand the structured development of a process or sequence from concept to production.
Activities –
• Project research and design
• Assembly of projects
• Knowledge and safe use of power tools and machinery used to undertake projects
• Maintenance of small engines.

ELECTRONICS & TECHNOLOGY - 10SCEE
This course is designed as a follow on to module 1 and 2.

Module 2
This module further develops the basics of electronic theory covered in module 1 and 2. This will be complemented with the construction of more complex circuits involving the use of computer added design.

Module 2
This module will cover the use of programmable microcontrollers, Arduino, in the development and construction of a series of projects, culminating in the LDR challenge, a line tracker robot.

Note: Year 10 students who have not completed Year 9 must complete Module 1 and 2.

FURNITURE WOODWORK - 10DW
In this course students are exposed to more advanced furniture making techniques using traditional and modern joining methods. Once again there is a strong emphasis on the safe use of machines and power tools.

Projects that have been offered in this course include a bedside table, bar or kitchen stool, DVD tower and storage unit, as well as a variety of smaller projects. This course is an excellent introduction to furniture making and gives students an excellent preparation for Year 11 and 12 Woodwork Technology course.

JEWELLERY TECHNOLOGY – 10DJ
• This course provides students with the opportunity to create exciting pieces of Jewellery in a fun, creative environment. There is a mix of set projects, and pieces requiring some individual design.

• Processes developed include lost wax casting, silver soldering, and forging from metals such as sterling silver and brass. Polymorph plastic is also used to create organic shaped jewellery. Other materials used to decorate
jewellery include mother of pearl shell, dichroic glass, cubic zirconia gems, and carbon fiber.

- Jewellery Technology is a subject suited to both male and female students, with an increasing number of males enrolled in 2014. Projects are adjusted to appeal to both sexes.

- The course now introduces ITC based technologies such as 3D Printing and laser cutting to produce jewellery.

- This course provides an excellent foundation for students wishing to do jewellery in Senior School as a GENERAL course in Materials Design and Technology.

Please direct any queries to Mr Christmas.

METAL TECHNOLOGY - 10DM

In this course students continue to develop their hand skills and techniques with more detailed assembly projects. More specifically, they develop their skills in the use of metalworking hand tools, safe work procedures with power tools and associated equipment and reading more detailed workshop drawings. There is a greater emphasis on the use of the lathe and milling machines, with MIG and fusion welding being introduced in this course.

Other skills and procedures that are developed include; spot welding; manipulation of sheet metals; lathe work, such as facing, parallel, taper turning and drilling; silver soldering and brazing; use of Oxy Acetylene Equipment with the lighting and of setting flames; thread cutting; and the use of Milling and Drill Press Machines, pneumatic tools and the Fly Wheel Press.

This course requires a greater degree of precision and manipulation of equipment, machinery and hand tools than in Year 9.

The Technology Process is further developed with tasks such as the Bouncing Dog, the Bulldozer and personal projects.

TECHNICAL GRAPHICS - 10DT

This course provides an enjoyable opportunity to develop students' creativity, skills and knowledge while using an exciting universal communication language known as Technical Graphics or Technical Drawing for those of us born a few years earlier.

After experiencing some short foundation projects involving both engineering and architectural drawing, students will choose a pathway in either of these fields in which they focus for the year. In each pathway they will be given design problems and provide solutions in the form of detailed plans and drawings as well as 3D presentations to promote/test their designs.

Students will also design images using vector graphic drawing software for outputting to CNC machinery as per industry standards.

Equipment available for use in the classroom consists of 3D Printers, Vinyl Cutter, Milling Machine, Laser Cutter/Engraver and various hand tools with which to bring their designs to life.

All design software used on the Technical Graphics computer work stations is available on the College provided laptops. Students also have the opportunity to use 3D software on their home computers as part of school software licensing agreements.

If you have an interest in this course and would like further, more specific information, please do not hesitate to see the Technical Graphics teacher.
HOME ECONOMICS

YEAR 9

FOOD, CULTURE and TRENDS - 9HFC
This is a dynamic course exploring the most interesting sections of our current hospitality trends. Students will examine factors that affect food choices and also explore the advent of the celebrity chef combined with the popularity of cooking shows. They will also learn about the melting pot that is Western Australian society and examine traditional foods, equipment and recipes from the many cultures represented here. The course will culminate with a Food Festival prepared and presented by students for parents and staff.

COTTAGE INDUSTRIES - 9HCI
Leisure time is the focus of this course and developing skills in a variety of craft areas to fill this time. Students will be involved in the production of a variety of different craft projects to suit many tastes. Including; chocolate making, floral art, beading, tile painting and a variety of Christmas projects. The course adapts to whatever trends are happening at the time.

CHILD CARE - 9HCC
Through an emphasis on practical activities, students will briefly investigate the stages of child development from birth onwards. They will explore the roles and responsibilities of babysitters and parents and the part they and other family members play in helping to satisfy a child’s basic needs. Students may prepare meals for young children as well as making items of clothing and toys. Baby bathing and feeding demonstrations will be given, usually presented by invited guest speakers.

YEAR 10

EASY ENTERTAINING - 10HF
Easy Entertaining examines food as a symbol of hospitality and involves students in planning and preparing food for social occasions. It develops the student’s skills in more specialised food preparation and formal entertaining culminating in a meal being prepared and served to guests. Students will have hands on experience with a commercial cappuccino machine, developing their barista skills in a café situation, when studying the “café culture” aspect of this course.

CLOTHING AND FASHION - 10HCF
The costs of clothing can discourage students when they want to buy clothes, so making their own garments can be the answer. Students will learn the fundamentals of garment construction and be encouraged to be creative in making clothes for themselves or others for special occasions or everyday wear. Students will learn to select colours and styles that best suit their figure types.

COTTAGE INDUSTRIES - 10HCI
This is a craft based course with students making a variety of articles suitable for use and decoration of the home. They are also involved in creating goods both craft and food based they can sell for a small business venture. Second semester also has an extended Christmas theme.

CHILD CARE - 10HCC
In this course, students will study the conception, birth of a baby and different birthing techniques. Guest speakers and excursion will be incorporated to give the students a better understanding of the roles and responsibilities of parenting.
INFORMATION TECHNOLOGY

YEAR 9

COMPUTER LITERACY – 9IC
This course makes extensive use of practical activities and each week students learn a new skill in using multimedia and computer software. Activities include creating animated movies using digital cameras, creating interactive web pages, using Premiere and video cameras to create digital movies, creating multimedia games, creating original audio and music files, using Photoshop and digital cameras to capture and manipulate digital images, creating stick animations, using Flash to create multimedia programs, and learning a simple programming language. At the end of the course students have a good understanding of a range of software that is very useful for personal and career purposes.

YEAR 10

PROGRAMMING PRINCIPLES - 10IP
This course makes extensive use of practical activities to teach students how to create programs in different programming languages. Languages in this course include Pascal, Visual Basic, Flash and ActionScript as well as shorter activities in 3D programming and programming for graphical environments. All activities are hands-on and there are no homework requirements. Each week students create new computer programs and learn new skills in computer languages.

COMMERCE – 10IC
Are you sick of being told what to do? Would you love to own your own business and be your own boss? Then Commerce is the course for you! This course is all about learning how to keep your small business records accurate so you can maximise your profit. Find out about which financial institutions you will have to deal with, and how the government and other community bodies can influence your decision making. Become a cash savvy potential entrepreneur with the skills to identify the main issues involved in business decision-making and analyse the financial performance and position of potential business options. The completion of this course is also an excellent preparation for the study of Accounting and Finance in Senior School.
